Github: <https://github.com/JohnOGama>

Summary

Fullstack Engineer with 2+ years of experience building responsive web applications using React, Next.js, Angular Js, NestJS, and Node.js. Knowledgeable in CI/CD pipelines, Dockerization, Docker Compose, and Nginx configuration for deployment. Familiar with AWS services including S3, EC2, CloudFormation, and IAM roles, with a strong focus on scalable, maintainable, and performant systems. Collaborative team player experienced in remote, cross-functional environments.

Technical Skills

Languages

TypeScript, JavaScript

Frontend

React Js, Next Js, Angular Js, Tailwind CSS, Responsive Design, Design System, Component Architecture, State management

Tools & Platform

Git, GitHub, Visual Studio, Cursor AI, Postman, Jest, ShadCN UI, ChatGPT, React Query, Ether.js

Development Practices

Version Control (Git), API Integration, Unit Testing, Type Safety, Clean Code Principles (KISS, DRY)

Backend

Nest Js, Nodes Js, GraphQL, REST API Development, Better-auth, AI Integration, Embedded AI, Job Queue

Database & ORM

PostgreSQL, TypeORM, Drizzle ORM, Database Design

Cloud/Deployment

Vercel, Railway, Neon, Amazon Web Service (AWS) CI/CD, Docker, Nginx, GitHub actions

Experience

Affirmdata

Aug 2025 - Nov 2025

Software Developer | Contract | United States (remote)

- Migrated the platform from Bubble to Next.js and Tailwind CSS, improving scalability, performance, and long-term maintainability.
- Developed timesheet tracking, job management, and invoicing features for freelancers and employers.
- Collaborated with the team across both frontend and backend development.
- Integrated Zustand for efficient and scalable state management.
- Built reusable components and implemented lazy loading to enhance application performance.
- Implemented infinite scrolling and skeleton loading to deliver a smoother user experience.
- Configured and integrated NextIntl to support locale-based internationalization.
- Utilized TypeScript throughout development to ensure type safety, scalability, and improved maintainability.

Mobii PH

July 2024 - Sept 2025

Full Stack Engineer | Fulltime | Philippines (remote)

- Contribute to frontend by converting figma design into web application.
- Implemented WebSocket functionality to support real-time notifications for chat group participation.
- Utilized ether.js for smart contracts integration.
- Collaborated closely with UI/UX designers to align feature implementation with product requirements.
- Developed a scalable chain switcher using Privy Auth and EVM-compatible networks.
- Developed waitlist pages using React.js and integrated the GetWaitlist third-party service to enable built-in dashboard monitoring and waitlist management.

1TechHub

Nov 2023 - Aug 2025

Frontend Developer | Part time | Australia (remote)

- Built a scalable admin dashboard with Next.js, Tailwind CSS, and TypeScript.
- Managed state with Zustand and created reusable UI components.
- Utilized Optimistic update with Zustand store api management.
- Converted Figma designs into functional, and responsive pages.
- Integrated APIs and optimized data fetching performance.
- Implemented validated forms and dynamic tables using React Hook Form, Zod, and TanStack Table.

Training & Courses

CSS, Bootstrap And JavaScript And Python Stack Course

Completed a comprehensive course on Udemy, covering CSS, Bootstrap, JavaScript, and the Python stack, 2023

Front End Development Libraries

Learned the basic fundamentals of frontend development with its libraries, 2023

Responsive Web Design

Learned the responsive design with css using media query, 2023
